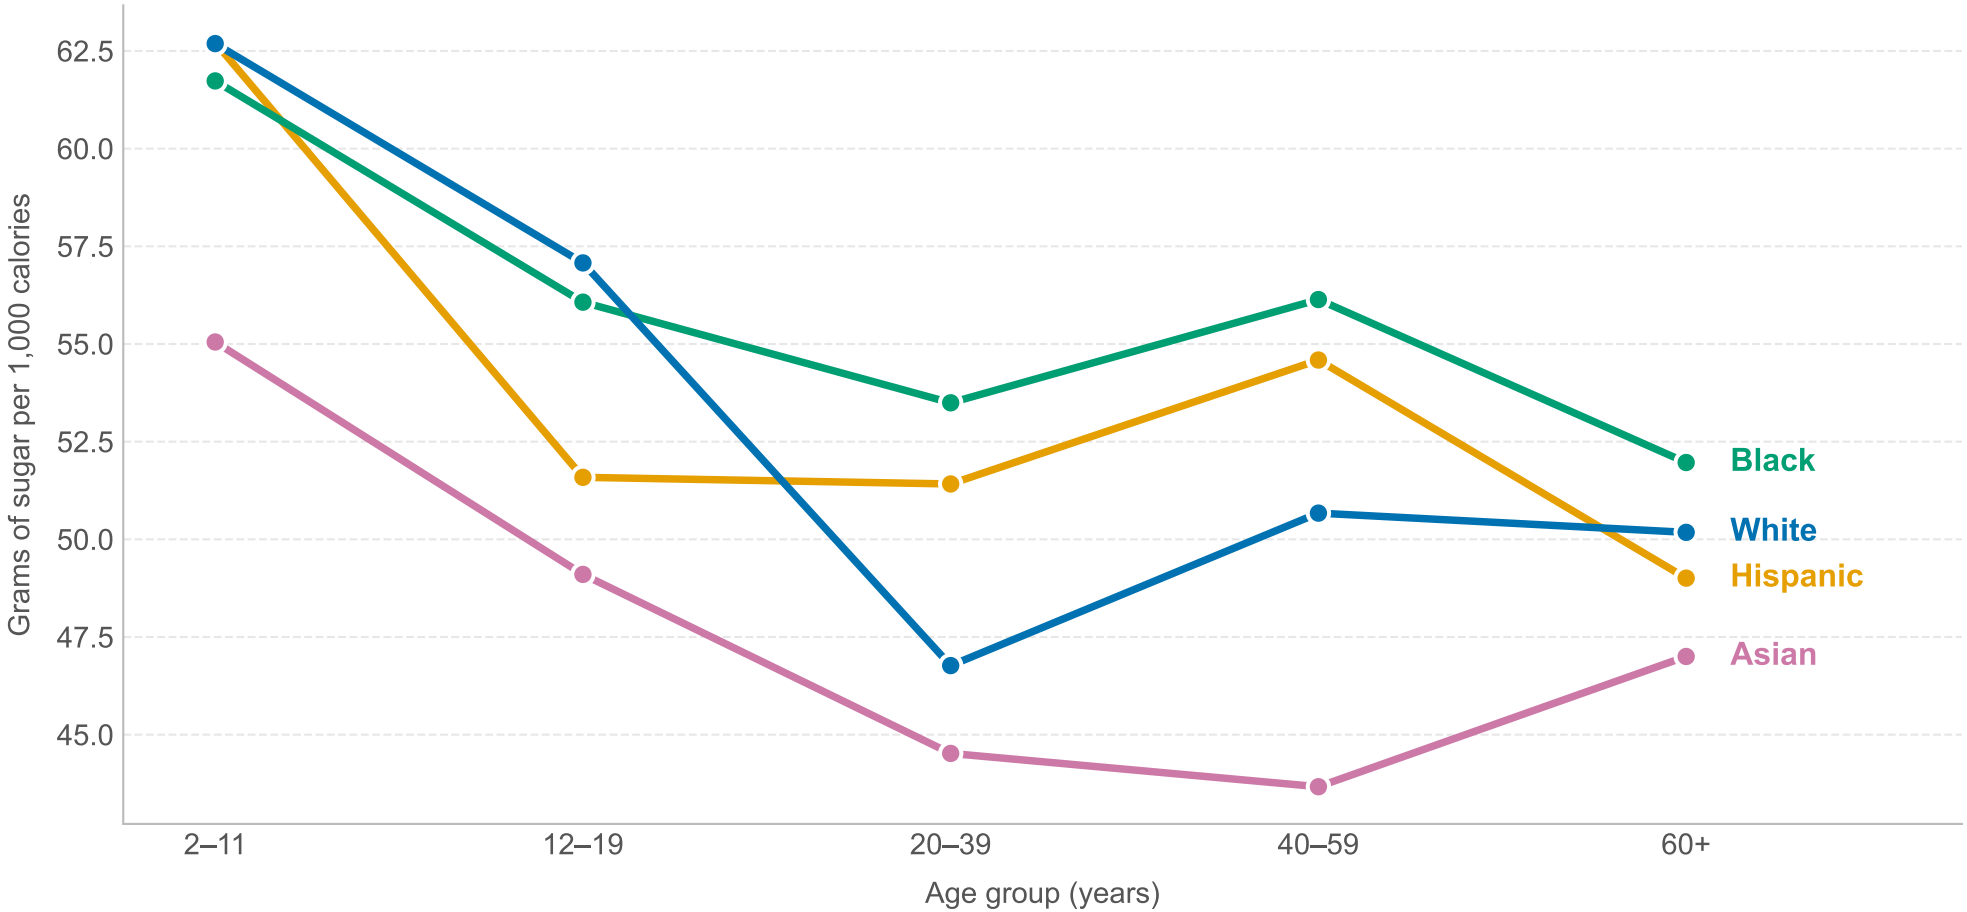
How sugary is the American diet at each age?

Average grams of total sugars per 1,000 calories eaten, by age group and race/Hispanic origin. Higher values mean a more sugar-dense diet.



Source: NHANES 2017–2018, Day 1 24-hour dietary recall. Survey-weighted estimates. Excludes breastfed children. Hispanic = Mexican American + Other Hispanic; Black, White, and Asian = non-Hispanic. Other/multiracial participants not shown. Total sugars include natural sugars (fruit, milk) and added sugars. Points based on fewer than 30 participants are hidden.
